845 inside was foam like the boiling turpentine. By giving the mother medicines the delivery succeeded, but the child's skin broke easily and inside was foam. The more bizarre aspects of this account may be discounted, but some factual basis probably existed.

Another case reported was a child born with the "head all hollow." Yet another had eyes "as though gouged out with a knife" and only the rudiments of a nose. Both children were [821] born dead. The phenomena were attributed to an eclipse. Few cases occur in which the mother has died without delivery being accomplished, but still-births are more frequent. Strangling with the cord is said to occur in some cases. Birth of children with clubfoot (said to be caused by the mother not taking care of herself) and blind children (caused by God's will) are both known. No hunchbacks were reported. One other case where the child's arm emerged first was reported; the child died but the mother lived. Animal births are mentioned also. Only one case accompanied by severe hemorrhage was reported.

[805] Children born in May are said to be mischievous and courageous, those born in February to be half crazy.

846 After the birth of the child the mother stays in bed from 8 to 15 days. At the conclusion of this time she bathes and gets up, but remains under food taboos and spends some time reclining during the next 5 days, when she bathes again and may go out of the house. The midwife visits the mother daily until she gets out of bed, massaging her. When the mother can walk, she begins to do small tasks. Full resumption of tasks is not undertaken until the termination of the food restrictions, about 40 days after birth. Some women do not go out of the house until 3 weeks have passed. After the mother has gotten out of bed, the midwife [278] may still massage her with unguents, either coconut oil or white lily. During the period the mother should not be left alone, so she will not be frightened or visited by an evil spirit. Usually the mother is cared for after birth by the husband's mother, by her own mother, or some female relative. Wealthier families, though, may hire someone to assist.

846 One case of what was probably a postpartur-
757 ient infection was recorded. The midwife

THE LEGENDS

539 [128] [173] [167] The eight Tarascan legends have been arranged in their presumed historical sequence. The creation myth is followed by a legendary account of tribal wanderings until the beautiful and abundant land, Michoacán, was reached.

[175] Next are four love stories explaining natural features of the countryside. The first of these belongs to the period of intertribal wars (1200-1400 A.D.) which eventually consolidated the empire. The second is a simple folk tale explaining the origin of an important spring. Rivalry between political and religious power may be perceived in the third. The fourth reflects palace intrigue and the problems of succession to the throne.

[648] The final two legends deal with the coming of the Spaniards. The first one prophesies their coming and the second presents a rationalization of the Conquest.

[128] The legends are preceded by short notes which place them in historical perspective.

THE BIRTH OF CUERÓHPERI

Historical Comment

539 805 [175] The Tarascans, like other cultured peoples of Mexico and Central America, had knowledge of the calendar. In the *Relación de Michoacán*, a work written probably in 1540-41 by an anonymous Franciscan priest, the names of fourteen of the eighteen Tarascan months of twenty days each are mentioned, and for four of the months the corresponding date in the Christian calendar is given (Caso, 1943).

539 796 793 173 292 At the fiesta of *Uazcata cónscuaro* (on June 27,) the chief priest, dressed in full pompous regalia, related the history of the nation and its princes.
